NATURE KOBE

Circular farming that keeps life in motion.

Raise the cattle. Build the soil. Grow the food.

NATURE KOBE is a circular-agriculture company from Kobe, Japan. We do more than deliver Tajima and Kobe Beef. Cattle manure becomes rich compost; the compost builds the soil; that soil grows rice and vegetables; and the crops and rice straw go back to feed the cattle. The food born in this cycle reaches your table together with the story of the people who made it.

How the cycle works

What the cattle give goes back to the soil and on to the next meal. This cycle is the heart of everything NATURE KOBE makes.

What we deliver

NATURE BEEF

Tajima and Kobe Beef from Usunaga Farm in Kobe, raised on mostly domestic feed. Moderate marbling, a long finish and deep-red lean meat.

NATURE RICE

Rice grown in paddies enriched with our cattle compost. Distinct grains and a gentle sweetness, milled to order and shipped fresh.

NATURE LEAF

Vegetables grown with the same compost: Tamba black-soybean edamame, and in winter Iwatsu leeks from Asago.

Why NATURE KOBE

Manure is not waste to be disposed of; it is a resource that makes soil rich. Return it to the fields as compost, feed the resulting rice and straw back to the cattle, and the region becomes self-sufficient and resilient to bad weather. We do not believe that A5 and heavy marbling are the only measure of quality. We pursue beef you want to eat again, and we want to share the story behind the food.

The three of us

Kurihara
Tamba Noshō / compost & feed

Ushio
Sales

Usunaga
Usunaga Farm / cattle
