The producer makes all the difference.

Usunaga Beef
the pride of NATURE KOBE

Tajima and Kobe Beef from Usunaga Farm, raised in the terroir of Kobe.

NATURE KOBE

Why Usunaga Beef tastes special

1 An uncompromising approach to feed

A healthy animal starts with what it eats. We rely mainly on feed grown in Japan and keep it as close to nature as possible: rice and rice straw, unused domestic by-products such as sake lees, okara, soybean meal and rice bran, plus lactic acid bacteria, yeast and natto bacteria — blended carefully to suit the season and each animal.

2 Healthy cattle with gentle digestion

Plenty of roughage keeps the rumen working well, so the cattle grow relaxed and free of stress. The result is beef rich in umami, with a long finish and deep flavour.

3 Raised in a cycle that connects life

Manure becomes compost, and the compost grows rice and vegetables. The soil grows richer, the crops grow, and the crops feed the cattle again. This cycle, in which nature and people support each other, is what sustains the flavour of Usunaga Beef.

4 Safe, honest food you can trust

Our goal is food that is not only delicious but good for producers, consumers and the children who come after us. We give the cattle nothing unnecessary and raise them close to nature, so the beef is gentle on the body and safe to enjoy.

Main feeds

Rice · Rice straw · Sake lees · Okara · Soybean meal · Rice bran · Brewer's grains · Lactic acid bacteria · Yeast · Natto bacteria

In the terroir of this land, we raise cattle, build the soil and grow a delicious future.
